

Wöhlk Contactlinsen GmbH

The forerunner to modern contact lenses was invented in Kiel when the visionary and innovator Heinrich Wöhlk tested the world's first dimensionally stable contact lens developed by him in an experiment on himself. With this he not only established modern contact lenses but also laid the foundation stone for today's Wöhlk GmbH. The founder's drive to explore, his wealth of ideas and passion are still firmly anchored in our company's DNA today.

We are the German market leader for customised contact lenses and a renowned pioneer in the development of ground-breaking and compatible materials, innovative manufacturing processes and high-quality products. The name Wöhlk not only stands for exceptional quality, state-of-the-art technology and ingenious solutions for better vision but also for "Made in Germany". As we research, develop and produce at our head office in Schönkirchen near Kiel – with a research laboratory, development department and the company's own contact lens studio.

Roughly 140 highly qualified and specialist professionals in total work under the leadership of the owner and CEO Lothar Haase on not just meeting our customers' requirements of our products but exceeding them time and time again – from engineers and physicists to chemists and software developers. Besides the results of our own research projects, we also benefit from our decades of experience and close cooperation with ophthalmologists and opticians. Our shared vision is to produce superior contact lenses for the very best quality of vision and maximum comfort.
